

SUPPLEMENTAL MATERIAL

Validity of the Kinarm Approach-Avoidance Task for Assessing Automatic Tendencies Towards Physical Activity and Sedentary Behaviours: A Registered Report

François Jabouille, Timothée Dumas, Jérémy Fortier, Michaël Patrick Robichaud, Brian Nhat Thien Nguyen, Frédérik Jolicoeur, Silvio Maltagliati, Boris Cheval, Kayne Park, Matthieu P. Boisgontier

Supplemental Table 1. Overview of dependent variables.

Supplemental Table 1. Overview of dependent variables

Name	What does it measure?	How is it computed?
Reaction time	Response initiation speed	Time from target onset to key press (manikin) or movement onset (KAAT).
Time to peak velocity	Reluctance to commit to action	Time from movement onset to maximum movement velocity.
X-flips	Movement wavering / decision difficulty	Number of changes in movement direction along the x-axis.
Opposite displacement	Response competition	Displacement in the direction opposite to the correct response.
